

# Power BI Dashboard – PDF Questions

## General Questions (1–5)

1. What was the objective of your Chocolate Sales dashboard?
2. Which dataset did you use and what were the key columns in it?
3. How did you handle date-related calculations when your original data didn't have a proper date column?
4. What types of visuals did you use in your dashboard and why?
5. How did you make the dashboard interactive for end users?

## DAX Measure Logic (6–10)

6. Explain how you calculated Total Sales for: - All time - Current year - Previous year - Current month - Current quarter
7. How did you calculate year-over-year (YoY) growth in %? What DAX functions did you use?
8. What is the logic behind the Running Total DAX? Which functions help create cumulative totals?
9. How did you identify the month with the highest sales in the last 12 months?
10. Explain the logic you used to compare Quarter-over-Quarter performance. Which DAX techniques did you apply?

## Advanced Analysis (11–15)

11. How did you create a measure to sum sales over the last 12 months regardless of the filter context?
12. How did you isolate and compare Q1 sales for each year?
13. What approach did you take to calculate sales difference only for December YoY?
14. How did you flag the months where sales exceeded last year by more than 10%?
15. What business insights or decisions could someone make using this dashboard?
