What is the purpose of the 'Data/Model' view in Power BI?

The 'Data' view allows you to explore and clean your data after loading. The 'Model' view helps in managing relationships between tables, creating hierarchies, and defining the data model structure for analysis.

What does a drill-through filter do?

A drill-through filter allows users to right-click on a visual and navigate to a detailed report page that is filtered to the selected context, such as a specific Region.

How do you use conditional formatting to highlight high-profit regions?

In the visual (like bar chart), select the 'Data colors' or 'Font color' section, click the 'fx' button next to it, then choose a rule-based condition such as highlighting values above a certain Profit threshold.

How can you simulate sharing a Power BI report with a colleague?

You publish the report to Power BI Service, then click 'Share' from the workspace and enter the colleague's email address. You can assign view/edit permissions accordingly.

How do you troubleshoot slicers not affecting all visuals?

Ensure all visuals are using the same field from the same table. Also check if interactions are turned off; go to 'Format' > 'Edit interactions' and verify that slicers affect the intended visuals.
